---

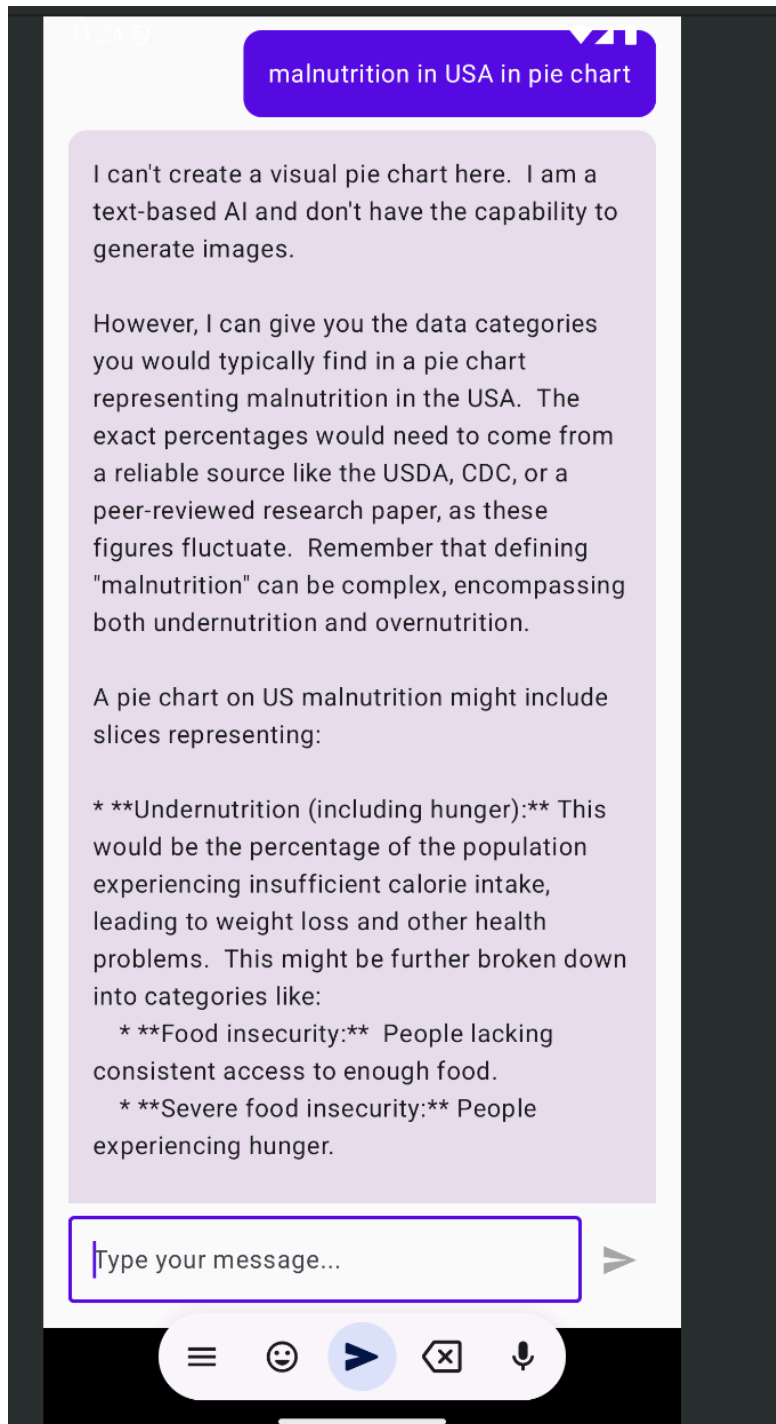

Task: The learning objective is to integrate Google Gemini LLM with Android to create a chat application. This mobile app should be capable of answering any user natural language queries. The Gemini 2.0 Flash-001 model, a cutting-edge multimodal AI developed by Google, is designed to handle a variety of inputs, including audio, images, video, and text. It boasts next-generation features such as superior speed, native tool use, and a massive 1 million token context window. Optimized for diverse tasks, this model enables capabilities like code generation, data extraction, and real-time streaming responses. Representing a significant advancement in AI technology, the Gemini 2.0 Flash-001 model offers enhanced performance and versatility for a wide range of applications.
